

▶ **DANDY BAG®** ◀

Use the Dandy Bag with flat grates, (including round), and mountable curbs to filter out all the sludgy sediment-laden storm water. The suspended solids are allowed to settle out of the slowed flow and are captured by the Dandy Bag prior to entering the inlet, ensuring regulatory compliance.

Get Maximum Benefits with Dandy:

- Unique patented design keeps silt, sediment, and debris out of storm systems
- Reduces or eliminates the need for flush or clean inlets
- Fabricated from a highly visible orange monofilament geotextile so it can be seen in any weather
- Sizes built to fit any inlet in any municipality
- Very easy to install, maintain, and inspect
- Can be reused

Installation:

1. Empty Dandy Bag should be placed over the grate as the grate stands on end.
2. If using the optional oil absorbers, place absorbant pillow in pouch, on bottom of unit. Attach absorbant pillow to tether loop.
3. Holding the lifting device (do not rely on lifting device to support entire weight of grate), place the grate into its frame.

Maintenance:

- Remove all accumulated sediment and debris from the surface and vicinity of the unit after each storm event.
- Remove the sediment that has accumulated within containment area of the Dandy Bag as needed.
